Summary

Fullstack software engineer who likes owning a problem end to end, from the data model and the cloud architecture to the interface people use every day. At TUI I build platforms that archive, process and search large volumes of logistics and travel documents, with Python and Vue on AWS, and add AI where it saves people real time. Before that I shipped web products for small businesses, helped found a startup as its designer and developer, and taught JavaScript and React to developers. In my own time I build small, finished tools: an Android reader for e-ink, a macOS menu-bar app, a dumb-phone conversion for an old iPhone.

Experience

TUI Group, Fullstack Software Engineer — Jun 2024 – present

Europe's largest leisure, travel and airline group — *Hybrid*

I design and build in-house document and data platforms for logistics and TravelTech: ingestion, archiving and processing pipelines on AWS (Lambda, DynamoDB, S3, IAM), Python services behind them, and Vue applications that teams across the company use daily. I added natural-language search over the archives and AI agents that take repetitive document work off people's hands, and I care about the parts that keep a system healthy over time: clear interfaces, tests, and changes that can be rolled out safely.

IMMUNE Technology Institute, Instructor, Master in Web Development — Feb 2024 – Apr 2025

Taught JavaScript, React, and prompt engineering and machine learning for developers. Reviewed students' code and final projects, and learned to explain a design decision in a way that sticks.

AF Consulting, Software Developer — Jun 2022 – Sep 2023

Built, maintained and improved web apps and online stores for small and medium businesses in Spain and abroad, focused on conversion, performance and search visibility. Owned each project from the client conversation to production.

fibsen, Developer & Designer, founding team — Jun 2019 – Jan 2020

Water-tech startup. Designed its first digital and physical products, the brand and its web presence, and worked on the pitch that led to its first funding.

Innsomnia, Project Manager (internship) — Feb 2019 – Oct 2019

Worked with the general manager of the accelerator on fintech, insurtech and industry 4.0 startups, helping them plan and scale.

Personal projects

- **Ligero** *(Kotlin, Android)*: e-ink PDF reader that reflows scanned books; offline OCR to EPUB.
- **Campanile** *(Swift, macOS)*: menu-bar prayer reminders and reader, fed daily by a Python CI job.
- **new_dumb_iPhone** *(Go, iOS)*: turns an iPhone 4S into a minimal phone, with a WhatsApp bridge in Go.
- **trackpad-curve** *(C, Go)*: libinput adapter with speed-dependent curves for Linux touchpads.
- **haskarm** *(Haskell, Python, ESP32)*: OpenCV tracks a hand; a Haskell control loop points a servo arm at it.
- **HTTPServer_C** *(C)*: an HTTP/1.1 server written from scratch on raw sockets.

Education

Computer Engineering, UNED

Master in UX/UI & Full Stack Development, Nuclio Digital School — 2023

MicroMasters in Statistics & Data Science, MITx — 2020

Languages and tools: Python, TypeScript, Kotlin, Swift, Go, C, Rust · Vue, React · AWS · Spanish (native), English.
